Zomato Mumbai Data Analysis Project

zomato

This CSV dataset contains information pertaining to various Zomato restaurants in Mumbai, like restaurant names, cuisine, ratings, votes, location, etc.

This dataset will help you with answering various questions, like which is the highest rated Seafood Restaurant, or which locality has the best Japanese restaurants, and so on.

1. Importing the libraries

```
import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
import plotly.express as px
import plotly.io as pio

pio.renderers.default = "svg"
```

2. Importing the dataset

Q10) Find the list of Affordable Restaurants?

The criteria for Affordable Restaurants would be:-

1) Low Price 2) High Rated

In [59]:

First step will be to find the restaurants with average cost 1/4th the average cost of most expensive restaurant in our dataframe.

Let me explain:-The most expensive restaurant has an average meal cost= 6000. We'll try to stay economical and only pick the restaurants that are 1/4th of 6000.

```
max_price = zomato_df['PRICE'].max()
           one_fourth_price = max_price/4
           one_fourth_price
Out[59]: 1250.0
In [60]:
           # Finding list of restaurants that have price less than and equal to 1/4th of the max price i.e Finding Cheap Restauran
           aff_rest_df = zomato_df[['NAME', 'PRICE', 'CUSINE_CATEGORY', 'REGION', 'CUSINE TYPE']]
           aff_rest_df = aff_rest_df[aff_rest_df['PRICE'] <= 1250]</pre>
           aff_rest_df.sort_values(by='PRICE', inplace=True)
           aff_rest_df
```
